S26460
Ig heavy chain V region - mouse
C;Species: Mus musculus (house mouse)
C;Date: 06-Uan-1995 #sequence_revision 06
C;Accession: $26460
R;Kavaler, J.
submitted to the EMBL Data Library, Aprinaperion of the EMBL
A;Reference number: S264
A;Accession: S26460
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-101 <KAV>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              R.Bird, J.; Galili, N.; Link, M.; Stites, D.; Sklar, J.

                                                        "Complete genome sequence of Vibrio vulnificus CMCP6.";
Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: This protein specifically catalyzes the removal of
signal peptides from prolipoproteins (By similarity).
-!- CATALYTIC ACTIVITY: Cleavage of N-terminal leader sequences from
membrane prolipoproteins. Hydrolyses Xaa-Xbb-Xcc-|-Cys, in which
Xaa is hydrophobic (preferably Leu), Xbb is often Ser or Ala, Xcc
is often Gly or Ala, and the Cys is alkylated on sulfur with a
diacylglyceryl group.
-!- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane
                                                                                                                                                                                                                                                                                         Lipoprotein signal peptidase) (Signal LSPA OR VV10506.

                                                                                                   FUNCTION: This protein specifically catalyzes the removal of signal peptides from prolipoproteins (By similarity).

CATALYTIC ACTIVITY: Cleavage of N-terminal leader sequences from membrane prolipoproteins. Hydrolyses Xaa-Xbb-Xcc-|-Cys, in which Xaa is hydrophobic (preferably Leu), Xbb is often Ser or Ala, Xcc is often Gly or Ala, and the Cys is alkylated on sulfur with a diacylglyceryl group.

SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane

-i- TISSUE SPECIFICITY: ADULT TEGUMENT.

-i- DEVELOPMENTAL STAGE: THIS ANTIGEN OCCURS IN ADULTS & SPOROCYSTS

-BUT NOT IN CERCARIAE, EGGS OR NEWLY TRANSFORMED SCHISTOSOMULA.

IT IS A DEVELOPMENTALLY REGGULATED PROTEIN.

-i- SIMILARITY: TO S.MANSONI ANTIGEN SM21.7.
                                                                                                                                                                                                                                                                                                                                                                                           Stein L.D., David J.R.; "Cloning of a developmentally regulated tegument antigen Schistosoma mansoni.";

SUBCELLULAR LOCATION: CELL SURFACE (POTENTIAL).

DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOMAIN (NCI) AT THEIR C.-TERMINUS, FREQUENT INTERRUPTIONS OF THE GAY Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOWAIN (WHICH MAY CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 75 DOMAIN.

- PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.

- PTM: Type IV collagens contain numerous cysteine residues which are involved in inter- and intramolecular disulfide bonding. 12 of

GENERAL INFORMATION:

APPLICANT: De Villiers Zur Hausen, Ethel-Micelle

APPLICANT: Zur Hausen, Harald

TITLE OF INVENTION: PAPILLOMA VIRUS, AGENTS FOR THE DETECTION

TITLE OF INVENTION: THERAPY

TITLE OF INVENTION: OF THE DISEASES CAUSED BY SAID VIRUS

FILLE REFERENCE: 008494-0082-999

CURRENT APPLICATION NUMBER: US/09/485,973

CURRENT FILING DATE: 2001-08-15

PRIOR APPLICATION NUMBER: PCT/DE98/02379

PRIOR APPLICATION NUMBER: DT/DE98/02379

PRIOR APPLICATION NUMBER: 197 35 118.2

PRIOR APPLICATION NUMBER: 197 35 118.2
